

Computer Hardware

1. Explain the function of input device with an example.

An input device is a hardware device used to enter data and instructions into a computer. It helps the user communicate with the computer system. The computer receives the information through these devices and processes it. Common input devices include keyboard, mouse, scanner, microphone, and webcam. For example, a keyboard is used to type letters, numbers, and commands into the computer.

2. Explain the function of output device with an example.

An output device is a hardware device that displays or produces the result after the computer processes the data. It helps users see, hear, or print the output generated by the computer. Common output devices include monitor, printer, speakers, and projector. For example, a monitor displays text, pictures, and videos produced by the computer.

3. What is the function of scroll wheel in the operation of the mouse?

The scroll wheel is located between the left and right buttons of a mouse. Its main function is to move a page up and down on the computer screen without dragging the scroll bar. It helps users read long documents, browse websites, and move quickly through files. In some applications, the scroll wheel can also be used to zoom in and zoom out.

5. Write two uses of webcam.

1. A webcam is used for video calling and online meetings.
 2. It is also used for recording videos and attending online classes.

7. Why do we use secondary storage device?

We use secondary storage devices to store data and programs permanently. These devices can store a large amount of information even when the computer is turned off. Secondary storage devices are useful for keeping files, photos, videos, software, and documents safely for future use. Examples include hard disk, pen drive, CD, and DVD.

8. Write a short note on DVD ROM.

DVD-ROM stands for Digital Versatile Disc Read Only Memory. It is an optical storage device used to store large amounts of data such as movies, games, software, and educational materials. A DVD-ROM can store more data than a CD-ROM. The data stored in a DVD-ROM can only be read and cannot be changed or erased easily.

10. List at least five input device and five output device.

Input Devices: Keyboard, Mouse, Scanner, Microphone, Webcam.

Output Devices: Monitor, Printer, Speaker, Projector, Plotter.

4. Difference between flatbed scanner and handheld scanner.

Flatbed Scanner	Handheld Scanner
Large and kept on a table	Small and portable
Paper is placed on glass surface	Moved by hand over document

6. Difference between RAM and ROM.

RAM	ROM
Temporary memory	Permanent memory
Data is lost when power is off	Data remains stored permanently

9. Differentiate between an impact printer and non-impact printer.

Impact Printer	Non-Impact Printer
Prints by striking ribbon on paper	Prints without striking paper
Produces more noise	Works quietly
